PROJECT REPORT

DIGITAL LITERACY

26 March, 2026

Name: Busani Naga Jahnavi

Course: B Tech. CSE (AI/ML)

Reg. No: 25BAI10480

Course Code: CSE0001

INTRODUCTION:

In today's fast-moving digital world, having basic knowledge of technology is not enough. Digital literacy is about using digital tools effectively, communicating professionally, and staying safe while using the internet. As students, we are constantly interacting with online platforms for learning, communication, and sharing information.

Therefore, it is important to understand how to use these tools responsibly and efficiently.

This project was designed to help us explore different aspects of digital literacy through practical tasks. As a Student Digital Ambassador, I worked on creating an infographic, building a digital portfolio, exploring online platforms, understanding email etiquette, and learning about cybercrime awareness. Each task helped me gain real-world knowledge and improved my confidence in using digital tools.

Overall, this project helped me understand that digital literacy is not just a skill, but a necessary part of everyday life.

Task 1 – Digital Literacy Infographic

For the first task, I created a digital literacy awareness infographic using Canva. The main objective of this task was to present important information in a visually simple and engaging way. Instead of writing long paragraphs, I used short points and divided the content into different sections to make it easier to understand.

The infographic included key topics such as the meaning of digital literacy, useful digital tools, safe internet practices, and maintaining a professional online presence. I added tools like Google Docs, GitHub, LinkedIn, Canva, and Google Drive, as they are commonly used by students for academic and creative purposes. I also highlighted the importance of strong passwords, avoiding suspicious links, and protecting personal information.

While designing the infographic, I faced some difficulty in arranging the content properly without making it look crowded. However, by using a structured layout and proper spacing, I was able to make it neat and readable. This task helped me understand how visual design can be used to communicate ideas effectively.

Task 2 – Digital Portfolio

In this task, I created my digital portfolio using platforms such as GitHub, LinkedIn, HackerRank, and Kaggle. The purpose of this task was to build an online presence and understand how different platforms can be used for learning and professional growth.

GitHub is a platform where projects can be stored and shared. I created my profile and added a README file to introduce myself. LinkedIn is used for professional networking, so I updated my profile with my education details. HackerRank helped me practice coding by solving a beginner-level problem, which gave me confidence in starting programming. Kaggle introduced me to datasets and the concept of data science.

This task made me realize how important it is to start building a digital identity early. Over the next few years, I plan to regularly update my profiles, work on projects, and improve my skills.

Task 3 – Platforms Exploration

Task 3 focused on exploring different digital platforms for learning and collaboration. In the first part, I solved a beginner-level problem on HackerRank. Although the problem was simple, it helped me understand how coding works and how to think logically while solving problems.

In the second part, I created a Google Form titled “Digital Literacy Awareness Quiz.” The form included five questions related to digital literacy, safe practices, and online tools. I also linked the responses to a Google Sheet, which automatically stores and organizes the data.

This task showed me how useful digital tools can be in collecting and analyzing information. It also helped me understand how technology can be used for both learning and interaction.

Task 4 – Email Etiquette

In this task, I learned how to write professional emails. I created two emails — one for requesting an assignment deadline extension and another for applying for a summer internship. Both emails were written using a formal tone, proper structure, and polite language.

I also created a checklist of social media do's and don'ts, which highlights how to behave responsibly on online platforms. Poor communication can lead to misunderstandings and leave a negative impression. For example, sending an email without a subject line or using informal language may appear unprofessional.

This task helped me understand the importance of clear and respectful communication, which is very important in both academic and professional environments.

Task 5 – Cybercrime Awareness

In this task, I learned about cybercrime, especially phishing attacks. Phishing is a technique used by attackers to trick users into sharing sensitive information through fake emails or websites.

What I found most interesting was how realistic these fake websites can look. It is very easy for users to trust them without checking properly. I realized that even a small mistake, like clicking an unknown link, can lead to serious consequences such as financial loss or account hacking.

I also created a prevention checklist that includes steps like using strong passwords, enabling two-factor authentication, and avoiding suspicious links. This task made me more aware of online safety and taught me how to use the internet more responsibly.

Conclusion

This project helped me gain a better understanding of digital literacy and its importance in everyday life. I learned how to use different tools, communicate professionally, and stay safe online.

Each task gave me practical experience and improved my confidence in using digital platforms. I believe these skills will be very useful for my academic journey and future career. Overall, this project was a valuable learning experience that helped me become a more responsible and aware digital user.
